

Pira Board Warp Gauge

The Pira Board Warp Gauge provides a method for determining the actual warp value for both solid and corrugated board as opposed to the typical Euroscan gauges used by many companies. It also answers calls from the industry to have a method of collecting data directly for SPC purposes.

Key features: -

- Digital readout
- Measures concave and convex warp
- 250mm Span
- Range ± 6.0mm (12mm available on request)
- Accuracy ± 0.02mm
- Metric or Imperial (user selectable)
- Tolerance Function

Prices: -

Standard gauge ± 6.0mm
